

South Gloucestershire

What was happening from 1 June 2026 to 31 July 2026, prepared for 19 October 2026.

Read this first: These are independent estimates from open data, not official operator or WECA figures. They measure timing-point observations, not cancellations.

57.4% ON TIME	20,278 QUALIFYING READINGS	87% WECA TARGET
-------------------------	--------------------------------------	---------------------------

Change: no comparable earlier readings.

Period change withheld: 13 July 2026: the replacement collector changed timetable matching and stale-position handling.

Month by month

Month	On time	Readings	Days
June 2026	54.4%	9,269	29
July 2026	60.0%	11,009	30

Routes seen in this area

Service	On time	Readings	Confidence
T1 (First Bristol)	51.5%	5,716	Usable sample
Y6 (First Bristol)	52.7%	918	Partial period
Y1 (First Bristol)	56.6%	5,188	Usable sample
Y2 (First Bristol)	56.9%	5,656	Usable sample
207 (Stagecoach West)	64.9%	866	Usable sample

The five lowest sampled routes are shown. A route needs 200 readings before this pack treats its figure as more than indicative.

Registered timetable changes

Not included: withheld because the two periods' calendar context, including school-term or seasonal differences, has not been checked.

Three questions to take into the meeting

1. Only 57.4% of 20,278 timing-point readings in South Gloucestershire were on time during this period, against the 87% area-wide target. What specific action is being taken for passengers in this area?
2. First Bristol route T1 was on time for 51.5% of 5,716 local readings. Does WECA's own route-level monitoring show the same problem, and is there an action plan?
3. This pack contains 20,278 readings across 59 service days. Will WECA publish its own monthly route-level scheduled and lost-mileage figures so the two sources can be compared?

What these figures do not prove

- These are independent estimates from open data, not official figures.
- Known incomplete audit days were excluded from every figure in this pack: 2026-07-01.
- The preceding-period change is withheld because the audit method changed within the comparison window.
- A reading is an observation at a timetable timing point, not a unique bus journey or passenger.
- Only readings within 150 metres of the timing point are counted; origin readings are excluded.
- Missing tracker observations are not labelled as cancellations.
- Area and ward route tables describe where qualifying readings were observed, not every place a route may serve.
- Registered timetable changes describe what was scheduled, not why it changed or whether each journey ran.
